Implementation Instructions

Listed below is the command set for the Application Programming Interface (API) for the FFC-CM Laser Driver boards. Since the FFC-CM does not have a touch screen or GUI, all commands must be performed via the API.

Computer communication to the FFC-CM Laser Driver Boards occurs through the I2C interface. Implementation of this interface has been left to the user. However, a list of API commands can be found below, or by downloading the FFC Gen2 Laser Driver Command API from the downloads section.
